Education

B.S. Computer Science 2024, Information Certificate

University of Utah, Salt Lake City, Utah

3.7 / 4.0 GPA Dean's list every semester

Skills

Coding Languages: SQL, Javascript, Python, C#, .NET, Java, C/C++, PHP, TypeScript, Terraform

Technologies: Git, Github Actions, Django, Linux, React, SQL Server, Docker, Google Cloud Platform, Node.js, Jira

Interests: Chess Player, Camping, Investing in Stocks, Vim, Running

Work Experience

Software Engineer @Digital Family Office

January 2026 - April 2026

- Contributed to the development of a multi-service .NET 10 + React platform on Google Cloud with terraform
- Built and deployed a new Cloud Run microservice that used Pub/Sub to orchestrate asynchronous domain, DNS, and email provisioning workflows
- Improved debugging and observability by embedding Google Cloud trace IDs in backend logs, allowing requests to be tracked across services
- Extended GitHub Actions CI/CD pipelines and automated testing with Playwright, improving release reliability

Junior Software Engineer @ CorEMR

July 2025 - January 2026

- Fixed bugs and improved site reliability for web-based EMR platform serving correctional facilities
- Proposed, planned, and implemented a user impersonation feature, collaborating with support staff and admins
- Investigated then presented system session and site's pinging mechanism to development team
- Researched and documented system features then reported findings to upper management

Software Engineer Contractor @Oak Tree

September 2024 - January 2025

- Collaborated with company leadership to design and implement a Dockerized authorization system for a medical imaging platform, ensuring secure access control
- Designed, developed and tested an automated sales tracking system using Python, reducing error rates to 0% and eliminating manual affiliate code entry for a small trading firm
- Worked directly with customers by calling them then fixing critical bugs in their calendar scheduling system, improving reliability for dozens of employees and their customers
- Authored technical "how to" documentation detailing the various software that I'd write for the company

Projects

Self-Hosted Portfolio Website | Django, JavaScript, SQL

Spring 2025

- Designed, implemented, tested, and deployed a personal portfolio website hosted on a Raspberry Pi at home, attracting 1000's of unique visitors, utilizing Django, Nginx, and Gunicorn
- Set up the networking and firewall for website through SSHing into remote server (Raspberry Pi at home)
- Developed a CI/CD pipeline for automatic testing and deployment using Github Actions
- Configured SSL certificates to enable secure HTTPS access
- Implemented defect reporting and tracking through logging errors
- Developed and integrated a RESTful API to facilitate communication between the front-end (HTML/CSS/JavaScript) and back-end (Django)
- Monitored, stored, and reported network utilization by tracking users of the site

Learning Management System | .NET, C#, SQL

Spring 2024

- Collaborated with pair programming to design, implement, and deploy the back-end of a Learning Management System (LMS) using C# and MySQL, delivering a fully functional web application that earned an A grade
- Developed a secure authentication system leveraging a .NET-based database framework
- Implemented unit testing with a mock database to ensure reliability and maintainability
